

print

Statement that when executed shows (or prints) on the screen the argument inside the parentheses.

display text

Write text characters that should be displayed on the screen between single or double quotes.

```
print("Hello world")
```

```
>> Hello world
```

display numbers

The number can stand alone or be the result of a math expression. We don't use quotation marks in these cases.

```
print(150 + 50)
```

```
>> 200
```
